

# CARBIDE RECOMMENDATIONS

We get questions from time to time about what carbide should be used. Below is what we recommend for our riders.

## **Shaper Bar Carbide**

## **Round Bar Carbide**

## **What is the difference between a Shaper and a Round Carbide?**

The **Shaper Bar** has a concave profile and is the choice for snocross racing and aggressive riders.

The **Round Bar** is an excellent choice for trail/mountain riding and will also work for racing.

## ***What length do I need?***

### **If you are a Flat-lander:**

Short track without studs:  
**use 4"- 6" carbide**

Short track with studs:  
**use 6" + carbide**

Long track without studs:  
**use 4"- 8" carbide**

Long track with studs:  
**use 8" + carbide**

### **If you are a Mountain/Powder rider:**

A minimal carbide will be sufficient:  
**use 4"- 6" carbide**
